Developer

I check code out of the Source Control Repository.

I check code into the Source Control Repository.

I label specific points in time in the Source Control Repository.

I comment my check in to the Source Control Repository so that meaningful history logs can be created.

Builder (i.e. Automated Build Tool)

I check code out of the Source Control Repository.

I create artifact from the code in the Source Control Repository.

I create reports about the code.

I enforce established standards on the code. The build fails if it does not conform.

I place successfully build artifacts into the Artifact Repository.

I label artifacts in the Artifact Repository for future reference.

I notify interested parties when a build is completed and what the status of that build is.
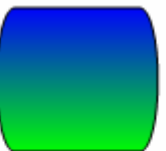

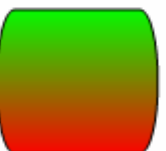

Deployer (i.e. Mid-Tier Team)

I check out artifacts from the Artifact Repository.
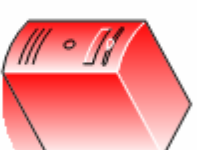

I deploy artifacts to the Application Server.

I notify interested parties when the deployment is completed and what the status of the deployment is.
